NOTE—We take this opportunity to thank our many friends for the patronage given us in this very popular class of plants and again we greet you with a much more complete list of varieties, undoubtedly the largest list given by any concern in the United States. We also cordially invite you to visit our gardens to see our specimen plants in bloom, the best season of flowers extending from May to November.

NAMES—The names given are those most generally accepted and we are constantly working to clear up nomenclature where in doubt, in fact have imported plants from abroad merely to clear up doubt in some instances. The varieties in our previous list have been thoroughly checked for duplications and where a name is missing from this list it will generally be found under a more correct name.

CULTURE—Fuchsias love the shade and moisture and for this reason are well adapted for the shady side of buildings where they give a wealth of bloom. They respond to a rich soil and applications of well rotted manure is advocated with additional feedings of more concentrated plant food. They will not stand an outside temperature below 20 degrees Fahrenheit.
